

Table. Ion microprobe age data from Domain 3 monazite grains.

Sample ^a (monazite_spot)	Age (Ma) ($\pm\sigma$)	$\text{ThO}_2^+/\text{Th}^+$ ^b ($\pm\sigma$)	Standard ^c $\text{ThO}_2^+/\text{Th}^+(\pm\sigma)$	$^{208}\text{Pb} (\%)$ ^d ($\pm\sigma$)	$^{208}\text{Pb}^*/\text{Th}^+$ ^e ($\pm\sigma$)

a. The nomenclature indicates the grain and spot, respectively, of the analyzed monazite. Sample name is indicated in bold. See Figures 3 and 4 for locations. See Table 2 for a summary of the age data.

b. Measured ratio in sample.

c. Measured ratio of the standard grains.

d. The % $^{208}\text{Pb}^*$ is the percent radiogenically derived ^{208}Pb .

e. Corrected sample ratio assuming $^{208}\text{Pb}/^{204}\text{Pb}=39.5\pm0.1$ [Stacey and Kramers, 1975].

f. Monazite inclusion in garnet.
